November 2026

ENERGY EFFICIENCY POLICY

Vibiplast S.r.l. has defined its requirements for implementing, maintaining, and improving its Energy Management System (EMS). It has established an energy policy appropriate to the aims of its organization, ensuring the availability of information and resources necessary to achieve its energy objectives and targets, and meeting the legislative requirements applicable to energy use and consumption.

To ensure these objectives, our organization:

- Applies an Energy Efficiency Management System compliant with the requirements of ISO 50001, with the goal of pursuing continuous improvement in energy performance and the EMS;
- Employs appropriately trained, reliable, and knowledgeable personnel who work safely every day in accordance with the policy promoted by Company Management and communicate at all levels;
- Prioritizes the procurement of products and services by including, where applicable, energy performance among the criteria for selecting and evaluating suppliers, constantly monitoring qualified suppliers, and sharing our needs and expectations with them;
- Seeks the best available techniques (BAT) for plant design, management, and control systems capable of ensuring a high level of environmental protection, as stipulated by European Directive 2010/75/EU and implemented in Legislative Decree 46/2014;
- Promotes the optimization of production processes by monitoring specific energy consumption and reducing operational inefficiencies;
- Periodically analyzes, reviews, and updates this energy policy, verifying its continued alignment with corporate objectives and changes in the operating environment;
- Periodically assesses risks and opportunities, considering changes in the operating environment, energy supply conditions, stakeholder needs, and relevant issues related to climate change.

This policy is communicated at all levels of the organization and made available to stakeholders
